

Types of Adapted Bikes

Foot driven cycles

Foot driven cycles resemble a standard tricycle that is modified to meet special needs. The three wheeled styling offers a wider base of support to allow increased independence for those with balance issues. They are suitable for children and adults with a wide range of physical problems from mild balance problems to more severe disabilities.

Optional Accessories: A front hand brake for safety, trunk and hip supports, a fixed position wheel and foot saddle attachments to the pedals which helps the peddling action, an adductor support to help with scissoring of the legs, along with numerous other accessories to aid in proper positioning and safe riding.

Hand driven cycles

Like the foot driven cycle, the hand driven cycle also provides a wider base of support for increased stability. The hand driven cycle would be ideal for those with poor balance, reduced leg strength, incomplete para- or tetraplegia, hemiparesis, generalized muscle weakness, amputation, or back pain. Multiple accessories are available including various seating options for increased stability and comfort.

Optional Accessories: A front hand brake for safety, trunk and hip supports, a fixed position wheel and foot saddle attachments to the pedals which helps the peddling action, an adductor support to help with scissoring of the legs, along with numerous other accessories to aid in proper positioning and safe riding.

Tandem cycles

Tandems, or two person models, are available for those riders who would prefer to ride with another person rather than be totally on their own. Several different designs include side by side tandems, front and back tandems that are versatile so that the rider with a disability may ride in either position, and a wheelchair based tandem where a bicycle attaches to the rear of and pushes a wheelchair. In some models, the wheelchair is detachable for participation in activities while you are out. Certain tandem bicycles allow for there to be a passive rider who can sit back and enjoy the experience of riding without the physical exertion involved.

The **Recumbent Cycle** places the rider in a reclined position, while the **Prone** positioning cycles place the rider in a forward leaning posture with their legs behind them in relation to the midline. This is recommended for those with high extensor tone and/ or poor head and trunk control.

The **bicycle trailer** attaches to the back of a standard adult bicycle. Various seating devices and accessories are available based on the needs of the consumer.

To assist in your search for the product that fits your individualized needs, we have developed a categorization system. Following each company name there is a series of letters that correspond with a letter in the key below. Determine what criteria the product you are searching for needs to meet, and then eliminate those who do not, speeding up the process.

Example: If I was searching for an adult (A), recumbent bike (R), It would be likely that I would find one possible product on the Freedom Concepts Inc. website since the categorization letters include "A" and "R".

Category Key:

A – Adult C – Children T – Tandem U – Upright
P – Prone R – Recumbent BT – Bicycle Trailer

Adaptive Specialties
(C,A,U)

Manufactures foot powered tricycles for pediatric and adolescent consumers up to 180 pounds.

9435 Waterstone Boulevard, Cincinnati, OH 45249
